

Marintec China

A holistic approach to deliver a net-zero world

5 December 2023

Guy Platten, Secretary General
International Chamber of Shipping

The time for talking is over – we MUST move forward

A holistic approach to net zero carbon emissions

No changes will be possible without people

President Marcos Jr of the Philippines speaking at the *Seafarer 2050* summit in Manila, June 2023

Progress to date has been slow

A [report commissioned](#) by the International Chamber of Shipping highlighted the major role the shipping sector will play in transporting the green fuels necessary to meet global climate goals. But it found a yawning gap between announced government led projects and what is required, calling for the creation of far stronger national policies on low-carbon fuels.

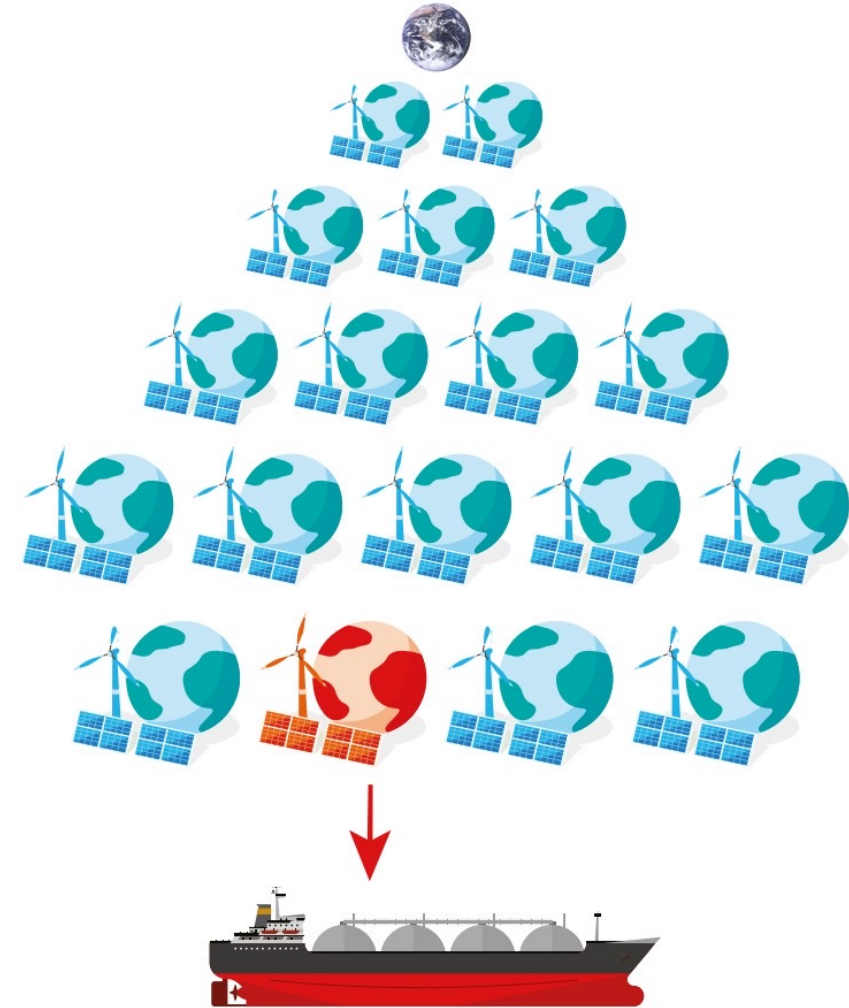

Only 4 % of the projects are operational.

Collaboration and alignment is critical

An Opportunity for All

- For **Net-Zero** the world requires **18-fold increase** in the world's existing renewable production capacity.
- The world requires an increase of **low-carbon fuels available at SCALE.**
- For its own use, **shipping needs the equivalent of one of these worlds** to meet its own renewable energy needs.
- This is why the **Clean Energy Marine Hubs** initiative is so important.
